## Clean/ Extreme Filter Collection Bag Upgrades any Wet/Dry Shop Vacuum\*

Transforms any standard wet/dry vacuum\* into a high performance, high efficiency vacuum for extracting ultra-fine powders ~ without filter blinding.

### Extreme Performance -

Non-blinding filter bag maintains the vacuum's suction performance

### Extreme Versatility -

COLLECTS EVERYTHING EVEN AT THE SAME TIME: Concrete, drywall and wood sanding dust, cold fireplace ash, paint chips, nails, glass, metal shavings, sharp objects, animal waste, insect larvae, sludge, oils, spill pick-ups, pressuring washing debris, pond and pool debris such as algae and foliage, etc.

### Extreme Durability -

Made of HD tear-resistant material. Extreme Filter Bags are routinely dragged during disposal without tearing. Plus, they will not burst inside the tank - as paper filter bags are prone to do.

### Extremely Economical -

Keep the bag in the tank until the tank is full - not the bag. Unlike other filter systems that require air or space in the tank or container, an Extreme Filter Bag does not. With an Extreme Filter Bag you'll be able to take advantage of the tank's size (which is why you purchased that particular size tank). Debris of any type, wet or dry, will continue to accumulate to the tank's inlet port - without loss of vacuum performance.

**Bonus - Everything stays CLEAN . . .** Collect 140+ lbs. of dry concrete dust in a 24 gallon tank, remove the motor head from the tank and you'll see:

**Clean Cartridge Filter** - Cartridge filters are kept clean - filtering at 100% efficiency. From paper to expensive HEPA filters, cartridge filters stay remarkably clean.

#### Clean Tanks

The inside of the tank stays clean - perfectly clean . . .

#### Safe Handling, Disposal & Reduced Bacteria Exposure

Even the outside of the bag stays clean, so touching and handling the filter bag is clean and safe. The extracted debris is securely contained for proper waste disposal.

#### No-Mess . . . Reduces Airborne Dust Exposure

Slide and drag the Extreme bag from the tank without risk of the tearing the bag . . . Completely full of dry or wet debris, Extreme Filter Bags endure rough handling.

#### Clean Air Exhaust

Attached to the tank's inlet port, Extreme Filter Bags upgrade your vacuum's filtration & containment efficiency by ensuring that ultra-fine particles are kept from being exhausted into your clean room. Plus the vacuum's motors & switches last longer - they're also kept clean.

**Everything stays Contained, Clean & Operating Efficiently**

Pricing - 3 Sizes:

---

**Small** P/N HL500-25 \*      2-1/2" Cardboard Collar - fits 7 to 16 gallon tanks  
\$ 13.85 ea, 2 / bag      \$ 11.55 ea, 20 / box      \$ 9.82 ea, 50 / case

Fits the following Dust Director Vacuums: KNG, DC-1, TP-12, plus any other vacuum with a 2-1/2" OD inlet deflector such as: Shop Vac, Ridgid, Bosch, Fein, Altos, and Wap.

**Large** P/N HL501-25 \*      2-1/2" Cardboard Collar - fits 16 to 30 gallon tanks  
\$ 19.79 ea, 2 / bag      \$ 16.48 ea, 20 / box      \$ 14.00 ea, 50 / case

Fits the following Dust Director Vacuums: DC-2, DC-3, HP3500, HP3900.

**Large** P/N HL501-40      4" Cardboard Collar - fits 16 to 30 gallon tanks (4" inlet port)  
\$ 22.00 ea, 2 / bag      \$ 18.70 ea, 20 / box      \$ 15.90 ea, 50 / case

Fits the following Dust Director Vacuums: AB-3

---

FILTER BAG INSTALLATION INSTRUCTIONS:

1. Expand pleats of bag. Grasp cardboard collar firmly and slide cardboard collar onto inlet port.
2. Push forward until the collar is completely secured on the inlet port and close to the wall of the tank. Be sure that all 360° of the cardboard collar and its sealing gasket is around the tank's inlet port - it is a very tight, secure fit.
3. Once installed, expand and position the bag inside the tank.

**ADDITIONAL FILTER INSTRUCTIONS:**

Only the vacuum's cartridge filter and the Clean/Extreme Filter Bag are to be used in the vacuum - no other filters are necessary

Drop-in Filter Baskets may be used however, because of their length they will reduce collection yields in the Clean / Extreme Filter Bag. Thus, it is not recommended that they be used.

**Clean / Extreme Filter Bags Keep the Cartridge Filter Clean  
Tanks Stay Clean, Outside of the Bag Stays Clean**

**Overall Cleanliness, Safe Handling & High Filtration Efficiency  
Helps to Ensure that Clean Air is being Exhausted from *Your* Vacuum**

**Filtration Efficiency: 96.25 @ 0.3 Microns**

\* Fits any wet/dry vacuum with an inlet port (2-1/2" outside diameter).
